EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

To correct claim objections and antecedent basis issues:

- Claim 8, line 1, **replace** "application" **with** "applications".
- Claim 15, line 18, **replace** "." **with** ",".

2. The following is an examiner's statement of reasons for allowance: The cited claims all detail inputting information via a user interface of: a URL of a target source, start and end marker text of a target content of the source; and a structural location of the target content within target source code, such that when a software agent is generated by an agent builder program for automatically retrieving a target section of the target source code, the agent performs the operation by executing two program instructions, the first of which identifies a predefined structural location of the target content based upon a structural location of target content identified in a previous version of data retrieved from the target source and stored as the inputted information and a second instruction that identifies a predefined structural location of target content located within a version of data retrieved by evaluating the target source for the start

and end marker text when the content cannot be identified by the first program instructions. Support for the cited claim limitations is found at page 17, lines 3-30 and page 18, lines 1-14. The cited prior art of record Fields, at best teaches applying the second program instructions in an agent to find the target content for display. Fields teaches performing a search for target content by using the marker codes to determine where the target content is within a target document and retrieves that information for display. Since, Fields does not use structural location information inputted by the user or otherwise ascertained as outlined in the claims or performing the search based on first the structural location and then if that fails the marker codes, the claims are allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
